PhotoBackup PHP server

The PHP implementation of PhotoBackup server, made with core PHP functions.

Installation

Copy the files in a PHP-enabled webdirectory.

Apache should enable **mod_rewrite** and accept .htaccess files.

To Configure the server, change the constants/variables in the index.php:

- `MEDIA_ROOT`, the directory where the pictures are written in ;
- `PASSWORD`, the password as cleartext **SIMPLE BUT NOT RECOMMEND** ;
- `$pw_hash`, the sha512 hased password - if emtpy, the `PASSWORD` will be hashed
- `$logfile`, the path to a logfile - if emtpy/null, logging is disabled
